Sprint goal statement

LAST WEEK SCORE

###

PRIMARY QUESTION

**Evidence
Automation**

Release no.

W24

Sprint Goal

Automate one market evidence collection step using Python/yfinance to fetch Yahoo Finance data for **SPX, NDX, IWM, XLK, XLE**, and **XLFX**, then generate JSON outputs **for W4 prediction support**.

Done Means

- Python/yfinance script runs successfully
- Latest snapshot files are generated
- GitHub Actions test workflow passes
- Real Friday-close workflow exists
- README and DECISION.md are updated
- W4 prediction uses the automated evidence
- Repo is tagged vW24

Forecast contract

Broad index commitments

SPX | ^GSPC proxy

Direction: Neutral → Cautiously Up
Range: **-0.2%** to **+0.8%**
Confidence: Medium

NDX | ^NDX proxy

Direction: Up
Range: **+0.4%** to **+1.4%**
Confidence: Medium

IWM | IWM proxy

Direction: Flat → Up
Range: **-0.3%** to **+0.9%**
Confidence: Medium

Selected sector commitments

Info Tech | XLK proxy

Direction: Up
Range: **+0.8%** to **+2.0%**
Confidence: Medium-High

Energy | XLE proxy

Direction: Down
Range: **-1.5%** to **-0.3%**
Confidence: Medium

Financials | XLF proxy

Direction: Neutral → Up
Range: **0.0%** to **+1.0%**
Confidence: Medium

Assumptions / Risk Trigger

1. Main macro driver: FOMC Dot Plot and Fed forward guidance after a near-certain rate hold.
2. Technical invalidation: Daily close below 21D EMA or key support: SPX 7,380 / NDX 29,250 / IWM 284.

Sector rotation snapshot

Use this when the team needs quick visual proof of leaders, laggards, and breadth.

Narrative

Broad positive breadth: 9 of 11 sectors closed higher.

Leaders: Materials, Staples, and Technology.

Laggards: Energy and Communication Services were only slightly negative.

Interpretation: the move was not only tech-driven; rotation was broad enough to support the equity rally.

R3 Almanac Lead – Week 24 (15–19 June 2026)

CYCLE CONTEXT

- 2026 is a U.S. midterm election year.
- Q2–Q3 is historically the “Weak Spot” of the 4-Year Presidential Cycle.
- Market conditions expected to remain challenging until a potential recovery in Q4.

JUNE VITAL STATISTICS

Index	Rank (of 12)	Avg Return (Normal June)	Avg Return (Midterm Year)
S&P 500	9	+0.2%	-2.1%
NASDAQ	6	+1.0%	N/A
Russell 2000	7	+0.8%	N/A

June is one of the weaker months of the first half of the year, especially during midterm election years.

ALMANAC SEASONAL BIAS

BEARISH – NEUTRAL

PATTERN CONFIDENCE

MEDIUM

WEEK-SPECIFIC PATTERN (15–19 JUNE)

- This week includes June Triple Witching (options expiration week).
- Triple Witch week often experiences increased volatility.
- Seasonal patterns around options expiration can produce short-term market swings.
- The following week after June Triple Witch has historically been weaker for the Dow Jones Industrial Average.

➔ **Investors should remain cautious while recognizing that Technology continues to show favorable seasonality.**

SECTOR SEASONAL SIGNALS

Sector (ETF)	Signal	Seasonal Window	Avg Return
Technology (XLK)	LONG	Mid March → Mid July	+10.9%
Utilities (XLU)	LONG	Mid March → End October	+9.3%
Financials (XLF)	SHORT	Early May → Early July	-6.3%
Energy (XLE)	SHORT	Early June → End August	-5.7%
Materials (XLB)	SHORT	Mid May → Mid October	-5.1%

ALMANAC THESIS

Seasonality favors Technology and Utilities, while Financials, Energy, and Materials remain under pressure. With June Triple Witch this week and the midterm-year weakness continuing, a cautious, bearish-neutral stance is warranted.

Macro Event Status

Inflation / CPI Result

CONFIRMED

Headline CPI: +0.5% MoM (4.2% YoY)

Core PPI: Softer than forecast

Iran / Geopolitical Risk

UNVERIFIED

Event: U.S.-Iran peace deal looms / Hormuz risk

Impact: WTI Crude crashed 3.23%

US 10Y Yield

CONFIRMED

Yield: 4.48%

Impact: Easing pressure on growth/tech valuations

Week 25 Primary Driver

CONFIRMED

Event: FOMC Meeting (97.4% probability of Rate Hold) & Dot Plot

Technology
leadership

TOTAL SCORE: +1 (NEUTRAL-BULLISH)

Improving macro conditions and Technology leadership support equities, but June seasonality and Triple Witch volatility continue to limit conviction.

HUMAN OVERRIDE

AI CONSENSUS

- Fed stability
- GDP growth
- Lower yields
- Technology leadership
- Neutral-Bullish

HUMAN ADJUSTMENT

- Triple Witch volatility
- June weakness
- Recovery unconfirmed
- FOMC guidance risk

FINAL VIEW: Technology remains the strongest support, but seasonal headwinds keep the outlook Neutral-Bullish.

Actual: +0.87%

SCORE

1 / 3

Current sprint
calibration

Why missed?

The forecast is overly conservative. The human adjustment factor's "June seasonality" deduction is too heavy (-1), offsetting the actual strong momentum from tech stocks. The model failed to identify that tech leaders still possess a >0.5% driving force during periods of volatility.

Why hit?

The market performance exceeded R7's Neutral expectations, with technology leadership being even stronger than AI anticipated, successfully breaking through the seasonal resistance warned of in June.

LLM horse race update

Shows which model was closest to actuals and why.

Rank	Model	Prediction	Actual fit	Learning
1	Claude	Broad Up	Closest	Successfully identified the impact of Fed stability on the entire market, without being misled by seasonal biases.
2	ChatGPT	Up	Good	The trend of NDX (+0.64%) was captured, but the strong eruption of IWM was underestimated.
3	Gemini	Bullish	Good	The direction is correct, but the volatility risk of the Triple Witch mentioned in R7 is being overlooked.
4	DeepSeek	Sideways	Missed	Risk emphasis error: Over-weighting the "weakness in June" given by humans caused the gains to be completely missed.

One process change next sprint

Closes the presentation by turning calibration into an operational improvement.
